

Weather Outlook

Feb 5/6, 2010

Dave Ondrejik/Bruce Budd
National Weather Service
State College, PA

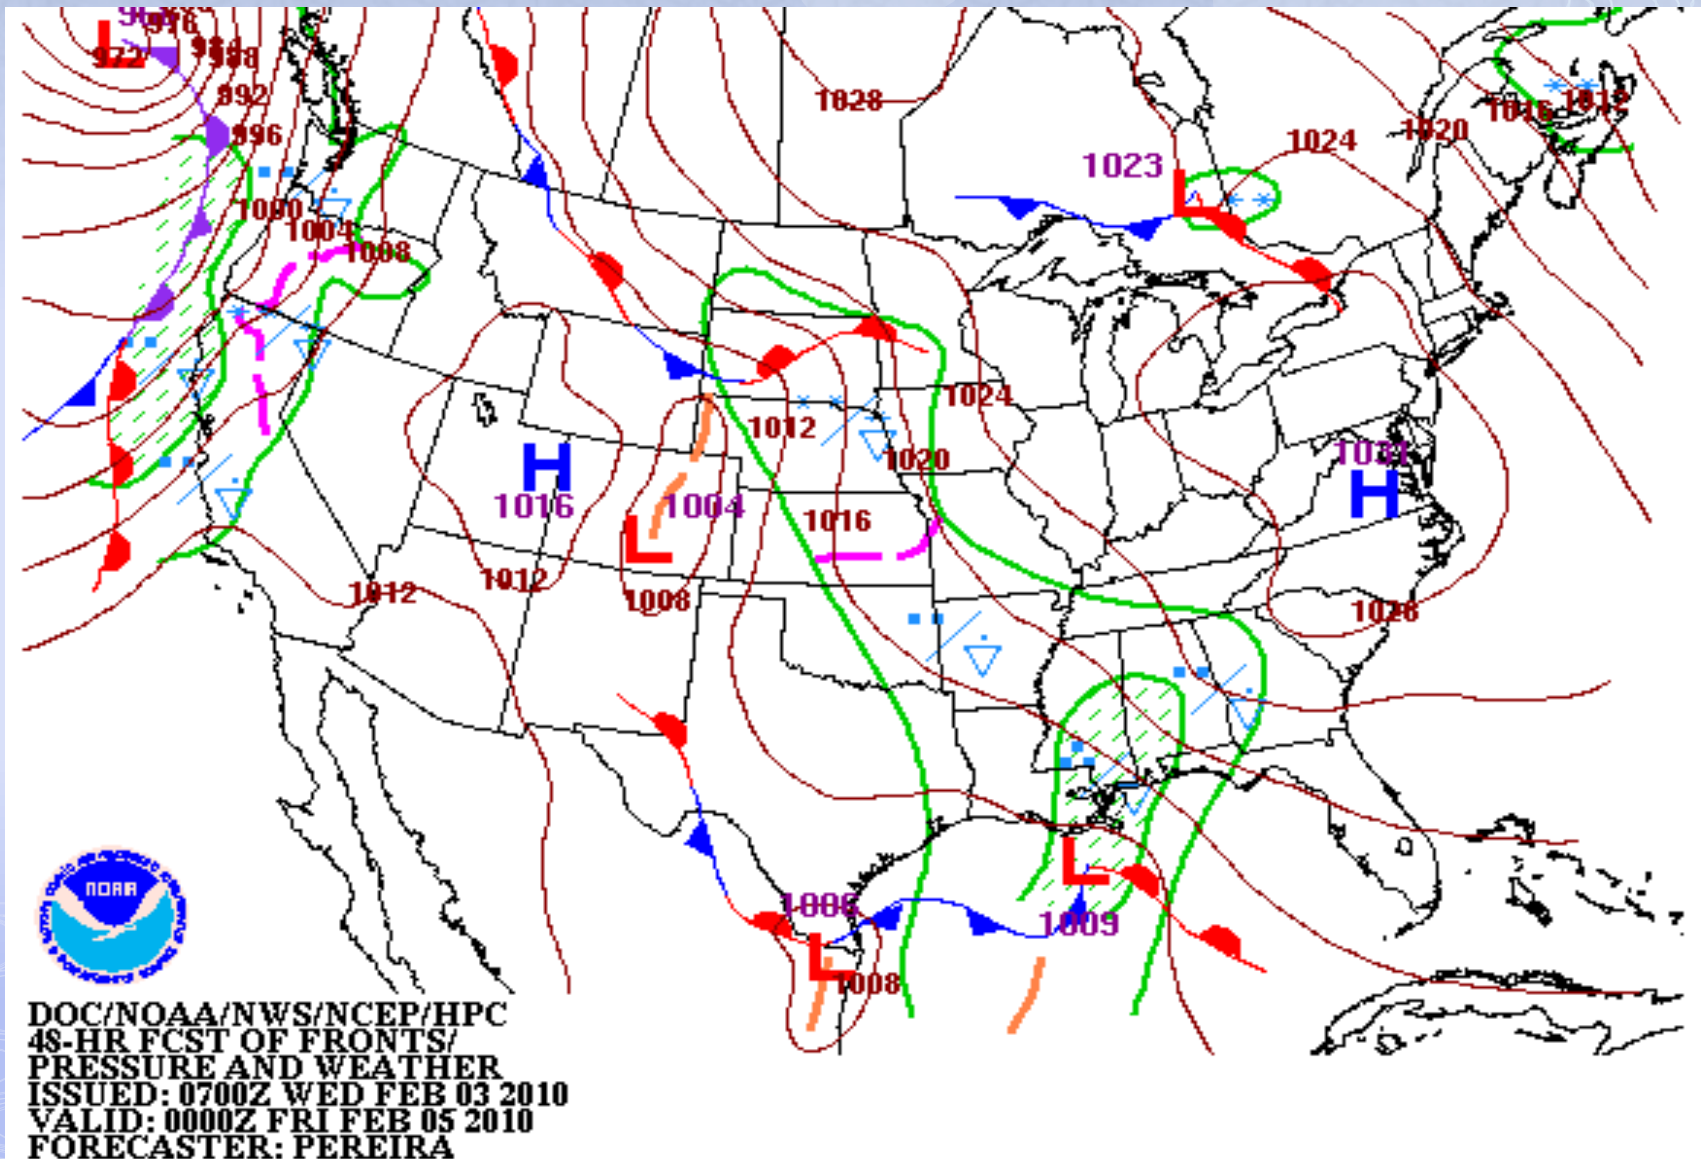

General Scenario

- ❑ Low pressure system from the Gulf Coast will move towards the east coast by Friday afternoon/evening.
- ❑ A coastal Low pressure system is forecast to develop along the North Carolina/Virginia coast and will move north.
- ❑ This system is expected to bring snow into the Commonwealth, with the heaviest snow over southern PA.

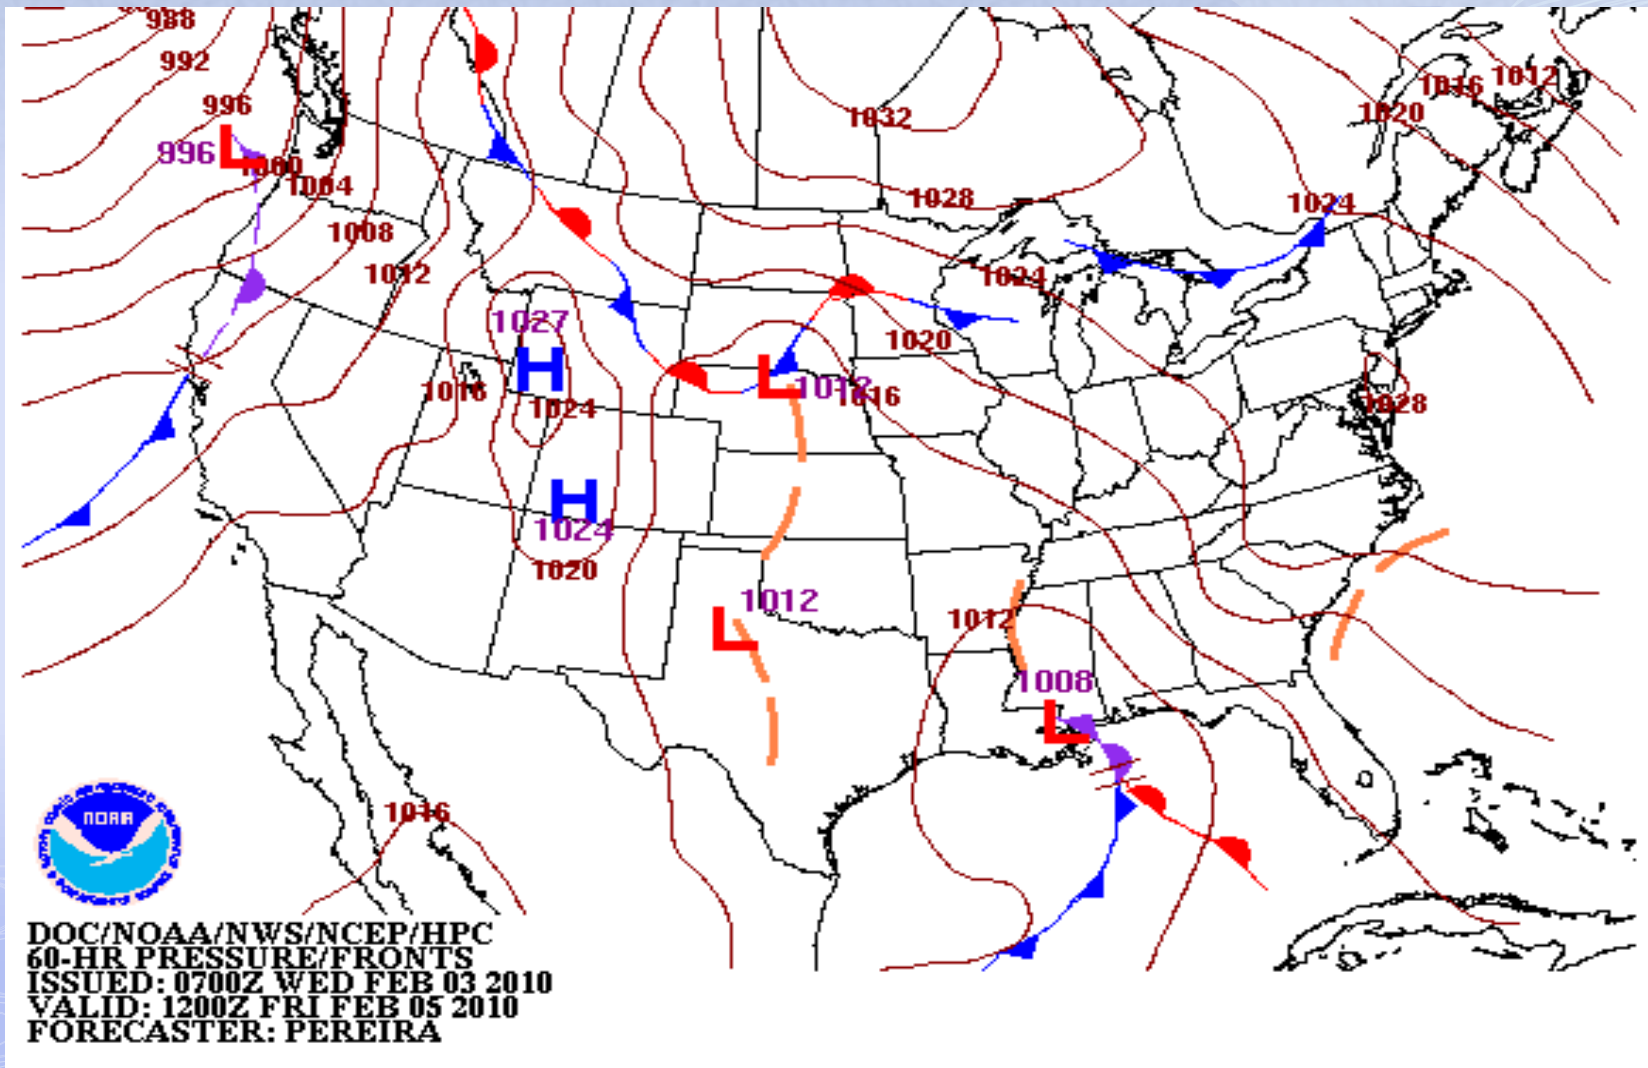

General Information

- ❑ We expect some light snow is possible during the mid to late afternoon on Friday.
- ❑ However the heaviest period of snow will be on Friday night and during the day on Saturday.
- ❑ Snow is expected to end by Sat night.
- ❑ Cold temperatures are expected after the storm passes.
- ❑ Low temperatures on Sun night and Mon night are expected to be below 20 statewide.

Snowfall forecast for Fri to Sat am

Summary

- ❑ Forecast is based on current track and expected development of coastal low.
- ❑ If track shifts or low develops further out to sea, snowfall amounts will differ from current forecast.
- ❑ Maintain situational awareness by following NWS products (Watches, Advisories, Warnings).
